TECTONE GROUP is a group of companies originally established in 1971 by S. PALOUMET BOURDA by bringing together several offices specialized in General Engineering studies extending to all areas, including nuclear.

For over 25 years, the TECTONE GROUP has since developed the marine construction field, especially engineering meant to modernize port infrastructures. Assisted by the PB Technical company responsible for research within the group, we have developed patented processes that help us keep costs low by:

- Reconditioning old docks, including draft deepening, using the "CLAVEBLOC" process.
- Extending existing or constructing new docks by using the "STABLOC" innovative hollow block solution.

The pages on this website illustrate the various steps to be taken to mount a preliminary study, establish a diagnosis, and propose suitable solutions.
